

## Publications by W. A. Day

- [1] *Equilibrium phases of elastic materials at uniform temperature and pressure*, Arch. Ration. Mech. Anal., **22** (1966), 253–269 (with E. Varley).
- [2] *Some best possible error bounds in deformation theory*, J. Inst. Maths. Applics, **2** (1966), 266–272 (with E. L. Albasiny).
- [3] *An asymptotic solution to the membrane equations for shells of revolution of negative Gaussian curvature*, Internat. J. Solids Structures, **3** (1967), 217–225.
- [4] *The numerical solution of linear one-dimensional parabolic problems by the method of moments*, J. Inst. Maths. Applics., **4** (1968), 140–162 (with E. L. Albasiny).
- [5] *The forced motion of an extensible mooring cable*, J. Inst. Maths. Applics., **5** (1969), 55–71 (with E. L. Albasiny).
- [6] *Thermodynamics based on a work axiom*, Arch. Ration. Mech. Anal., **31** (1969), 1–34.
- [7] *Useful strain histories in linear viscoelasticity*, Quart. Appl. Math., **27** (1969), 255–259.
- [8] *A note on useful work*, Quart. Appl. Math., **27** (1969), 260–262.
- [9] *On the symmetry of the conductivity tensor and other restrictions in the nonlinear theory of heat conduction*, Arch. Ration. Mech. Anal., **33** (1969), 26–32 (with M. E. Gurtin).
- [10] *On the conversion of heat into mechanical work*, J. Math. Anal. Appl., **27** (1969), 210–224.
- [11] *On monotonicity of the relaxation functions of viscoelastic materials*, Proc. Camb. Phil. Soc., **67** (1969), 503–508.
- [12] *A theory of thermodynamics for materials with memory*, Arch. Ration. Mech. Anal., **34** (1969), 85–96.
- [13] *Reversibility, recoverable work and free energy in linear viscoelasticity*, Quart. J. Mech. Appl. Math., **23** (1970), 1–15.
- [14] *Some results on the least work needed to produce a given strain in a given time in a viscoelastic material, and a uniqueness theorem for dynamic viscoelasticity*, Quart. J. Mech. Appl. Math., **23** (1970), 469–479.
- [15] *Time-reversal and the symmetry of the relaxation function of a linear viscoelastic material*, Arch. Ration. Mech. Anal., **40** (1971), 155–159.
- [16] *Restrictions on relaxation functions in linear viscoelasticity*, Quart. J. Mech. Appl. Math., **24** (1971), 487–497.
- [17] *When is a linear viscoelastic material elastic?* Mathematika, **18** (1971), 134–137.
- [18] *A condition equivalent to the existence of entropy in classical thermodynamics*, Arch. Ration. Mech. Anal., **49** (1972), 159–171.
- [19] *On the motion of an isolated body*, Arch. Ration. Mech. Anal., **50** (1973), 303–313.
- [20] *The effect of surface tension on the motion of an isolated fluid body*, Arch. Ration. Mech. Anal., **52** (1973), 104–111.
- [21] *On the Reiner-Weissenberg criterion for yield*, Quart. J. Mech. Appl. Math., **28** (1975), 207–221.
- [22] *On the least displacement, traction and work required to produce yield in viscoelastic materials*, Quart. J. Mech. Appl. Math., **28** (1975), 285–299.

- [23] *Continuum thermodynamics based on a notion of rate of loss of information*, Arch. Ration. Mech. Anal., **59** (1975), 53–62.
- [24] *Entropy and hidden variables in continuum thermodynamics*, Arch. Ration. Mech. Anal., **62** (1976), 367–389.
- [25] *An objection to using entropy as a primitive concept in continuum thermodynamics*, Acta Mechanica, **27** (1977), 251.
- [26] *The inaccessibility of the past in linear viscoelasticity: an information theory approach*, Arch. Ration. Mech. Anal., **64** (1977), 205–219.
- [27] *New estimates for work in linear viscoelasticity*, Arch. Ration. Mech. Anal., **64** (1977), 193–203.
- [28] *An information theory approach to the symmetry, monotonicity and concavity of the creep function in linear viscoelasticity*, Arch. Ration. Mech. Anal., **65** (1977), 47–55.
- [29] *An estimate for work in nonlinear viscoelasticity*, Quart. J. Mech. Appl. Math., **30** (1977), 467–473.
- [30] *Efficiency and the existence of entropy in classical thermodynamics*, Arch. Ration. Mech. Anal., **66** (1977), 73–81 (with M. Silavhy).
- [31] *Global mean value theorems in thermodynamics*, Arch. Ration. Mech. Anal., **70** (1979), 181–188.
- [32] *A work estimate for a linear viscoelastic fluid, with an application to convergence to equilibrium*, Quart. J. Mech. Appl. Math., **32** (1979), 9–15.
- [33] *Improved estimates for work in linear viscoelasticity*, Quart. J. Mech. Appl. Math., **32** (1979), 17–24.
- [34]  *$L_p$ -estimates for static stress fields*, Arch. Ration. Mech. Anal., **69** (1979), 99–108.
- [35] *The stress in a body under variable traction*, Arch. Ration. Mech. Anal., **72** (1979), 15–22.
- [36] *Means and autocorrelations in elastodynamics*, Arch. Ration. Mech. Anal., **73** (1980), 243–256.
- [37] *On the growth of the stress in a cylinder*, Arch. Ration. Mech. Anal., **74** (1980), 267–276.
- [38] *The inefficiency of certain periodic processes in linear thermoelasticity*, Mathematika, **27** (1980), 189–196.
- [39] *The decay of the energy in a viscoelastic body*, Mathematika, **27** (1980), 268–286.
- [40] *Synchronous tractions which produce unbounded kinetic energy or unbounded stress*, Arch. Ration. Mech. Anal., **75** (1980/1981), 203–210.
- [41] *Energy decay in a problem of linear thermoelasticity*, Mathematika, **28** (1981), 102–115.
- [42] *On the quasi-static approximation in dynamic linear viscoelasticity*, Arch. Ration. Mech. Anal., **76** (1981), 265–282.
- [43] *Generalized torsion: the solution of a problem of Truesdell's*, Arch. Ration. Mech. Anal., **76** (1981), 283–288.
- [44] *Some one-dimensional continuum analogues of the ergodic and recurrence theorems*, Arch. Ration. Mech. Anal., **77** (1981), 23–36.
- [45] *Cesàro means and recurrence in dynamic thermoelasticity*, Mathematika, **28** (1981), 211–230.

- [46] *Justification of the uncoupled and quasi-static approximations in a problem of dynamic thermoelasticity*, Arch. Ration. Mech. Anal., **77** (1981), 387–396.
- [47] *Further justification of the uncoupled and quasi-static approximations in thermoelasticity*, Arch. Ration. Mech. Anal., **79** (1982), 85–95.
- [48] *On the status of the uncoupled approximation within quasi-static thermoelasticity*, Mathematika, **28** (1981), 286–294.
- [49] *Mean and recurrence properties of the temperature in dynamic thermoelasticity*, J. Elasticity, **13** (1983), 225–230.
- [50] *Extensions of a property of the heat equation to linear thermoelasticity and other theories*, Quart. Appl. Math., **40** (1982), 319–330.
- [51] *The status of the heat equation* (Appendix to 2nd edition of C Truesdell’s Rational Thermodynamics, Springer-Verlag) (1984).
- [52] *A decreasing property of solutions of parabolic equations with applications to thermoelasticity*, Quart. Appl. Math., **41** (1983), 468–475.
- [53] *Asymptotic behaviour in dynamic linear thermoelasticity: an application of differential iteration*, Quart. J. Mech. Appl. Math., **36** (1983), 189–206.
- [54] *A property of the heat equation which extends to the thermoelastic equations*, Arch. Ration. Mech. Anal., **83** (1983), 99–113.
- [55] *Further remarks on a property of the equations of dynamic thermoelasticity*, Arch. Ration. Mech. Anal., **84** (1983), 69–81.
- [56] *On a qualitative effect arising from coupling in dynamic linear thermoelasticity*, Arch. Ration. Mech. Anal., **84** (1983), 83–98.
- [57] *Steady state oscillatory temperatures in coupled quasi-static thermoelasticity*, Quart. J. Mech. Appl. Math., **37** (1984), 581–596.
- [58] *A note on mean square maximum and minimum principles in dynamic linear viscoelasticity*, Quart. Appl. Math., **42** (1985), 433–437.
- [59] *A comment on approximations to the temperature in dynamic linear thermoelasticity*, Arch. Ration. Mech. Anal., **85** (1985), 237–250.
- [60] *Maximum and minimum properties of the temperature in linear thermoelasticity*, Quart. Appl. Math., **43** (1985), 159–166.
- [61] *Approximations to the temperature in a heated thermoelastic fluid*, Mathematika, **31** (1984), 31–48.
- [62] *On the failure of the maximum principle in coupled thermoelasticity*, Arch. Ration. Mech. Anal., **86** (1984), 1–12. [Reprinted in B. D. Coleman, M. Feinberg and J. Serrin (eds.) Analysis and Thermomechanics: A Collection of Papers Dedicated to W. Noll. Springer-Verlag (1987)].
- [63] *Initial sensitivity to the boundary in coupled thermoelasticity*, Arch. Ration. Mech. Anal., **87** (1984), 253–266.
- [64] *Positive temperatures and a positive kernel in coupled thermoelasticity*, Arch. Ration. Mech. Anal., **90** (1985), 313–323.
- [65] *Strictly decreasing functions of frequency occurring in a theory of heat conduction which takes account of thermomechanical coupling*, Arch. Ration. Mech. Anal., **91** (1986), 337–350.

- [66] *Positive deflections of elastic beams*, Quart. Appl. Math., **44** (1986), 327–336.
- [67] *A comparison theorem for moving averages of displacement in coupled thermoelasticity*, Arch. Ration. Mech. Anal., **91** (1986), 351–362.
- [68] *Steady forced vibrations in coupled thermoelasticity*, Arch. Ration. Mech. Anal., **93** (1986), 323–334.
- [69] *Maximizing thermodynamic efficiency by controlling conditions at the boundary*, Arch. Ration. Mech. Anal., **95** (1986), 23–36.
- [70] *On non-classical behaviour of the temperature in coupled thermoelasticity*, J. Elasticity, **17** (1987), 271–278.
- [71] *Sinks and boundary temperatures that neutralize a heat source*, Quart. Appl. Math., **45** (1987), 185–197.
- [72] *A comment on a formulation of the second law of thermodynamics*, Arch. Ration. Mech. Anal., **98** (1987), 211–227.
- [73] *A note on Maxwell's relation in linear thermoelasticity*, J. Elasticity, **18** (1987), 93–100.
- [74] *Adiabatic invariants for strings and membranes subjected to slowly-varying tension*, Quart. Appl. Math., **45** (1987), 349–360.
- [75] *Adiabatic invariants for strings, membranes, and beams, of slowly-varying dimensions*, Quart. Appl. Math., **45** (1987), 389–398.
- [76] *Enhancement of temperature decay by controlling conditions at the boundary*, Matematika, **34** (1987), 29–38.
- [77] *Parity, and the mechanical energy of a heated body*, Quart. Appl. Math., **46** (1988), 55–64.
- [78] *An adiabatic invariant for nonlinear thermoelastic rods under compression*, Quart. Appl. Math., **47** (1988), 85–92.
- [79] *Thermodynamic efficiency and frequency spectra*, Quart. Appl. Math., **46** (1988), 691–710.
- [80] *The homogeneous field approximation of classical thermodynamics*, Arch. Ration. Mech. Anal., **101** (1988), 349–363.
- [81] *Review of A C Pipkin's "Lectures on Viscoelastic Theory"*, SIAM rev., **29** (1987), 477–478.
- [82] *The efficiency of cycles of finite period*, Arch. Ration. Mech. Anal., **103** (1988), 369–387.
- [83] *The efficiency of an irreversible cycle*, Arch. Ration. Mech. Anal., **104** (1988), 111–123.
- [84] *A property of periodic solutions of parabolic equations which has implications for thermomechanics*, Quart. Appl. Math., **47** (1989), 159–165.
- [85] *The work done by a deformable heat conductor*, Arch. Ration. Mech. Anal., **105** (1989), 229–242.
- [86] *Heat baths are limited sources of work*, Quart. Appl. Math., **47** (1989), 313–322.
- [87] *Bounds on the heat absorbed by a deformable body*, Arch. Ration. Mech. Anal., **108** (1989), 309–321.
- [88] *Temperature fluctuation and the extension of a nonlinear filament*, Quart. J. Mech. Appl. Math., **42** (1989), 573–579.
- [89] *Review of J M Golden and G A C Graham: "Boundary Value Problems in Linear Viscoelasticity"*, SIAM rev., **31** (1989), 339.

- [90] *Neither asymptotic stability nor non-recurrence is a sufficient basis for the second law*, Quart. Appl. Math., **48** (1990), 441–453.
- [91] *The mean rate-of-working of a thermoelastic body*, Contin. Mech. Thermodyn., **2** (1990), 141–150.
- [92] *Inequalities for areas associated with conics*, Amer. Math. Monthly, **98** (1991), 36–39.
- [93] *A theorem about work in dynamic linear thermoelasticity*, Quart. J. Mech. Appl. Math., **44** (1991), 35–44.
- [94] *Inequalities associated with standing wave solutions of a hyperbolic equation*, Quart. Appl. Math., **49** (1991), 201–213.
- [95] *An asymptotic formula for the maximum work done by a thermoelastic body*, Quart. J. Mech. Appl. Math., **44** (1991), 357–367.
- [96] *Parabolic equations and thermodynamics*, Quart. Appl. Math., **50** (1992), 523–533.
- [97] *Slowly-varying periodic temperatures*, Quart. J. Mech. Appl. Math., **45** (1992), 225–230.
- [98] *Quasi-static cycles in dynamic linear thermoelasticity*, Quart. J. Mech. Appl. Math., **45** (1992), 517–527.
- [99] *Entropy and elliptic equations*, Quart. Appl. Math., **51** (1993), 191–200.
- [100] *Quasi-static cycles in dynamic linear thermoelasticity*, P M Naghdi, A J M Spencer and A H England (eds.) Nonlinear Elasticity and Theoretical Mechanics. In honour of A E Green. OUP 1–11 (1994).
- [101] *An inequality connected with the growth of entropy*, Quart. Appl. Math., **53** (1995), 187–198.
- [102] *On entropy and incomplete information in irreversible heat flow*, ZAMP, **46** (1995), 272–293. [Special issue in honour of P. M. Naghdi. Theoretical, experimental, and numerical contributions to the mechanics of fluids and solids, J. Casey and P. Crochet (eds.)].
- [103] *Rates of propagation of heat according to Fourier’s theory*, Quart. Appl. Math., **55** (1997), 127–138.
- [104] *A note on the propagation of temperature disturbances*, Quart. Appl. Math., **55** (1997), 565–572.
- [105] *A note on rates of propagation of disturbances for Burger’s equation*, Rend. Accad. Lincei, **s9** (1998), 145–148 (with G Saccomandi).
- [106] *A note on the propagation of the bulk of a disturbance for a hyperbolic equation*, Quart. Appl. Math., **57** (1999), 87–91 (with G. Saccomandi).
- [107] *On the propagation of the bulk of a mass subject to periodic convection and diffusion*, Quart. Appl. Math., **57** (1999), 561–572 (with G Saccomandi).
- [108] *Time versus distance for the propagation of heat in bounded domains*, Quart. Appl. Math., **58** (2000), 325–330.
- [109] *Two lines of defence of Fourier’s theory of heat propagation*, in Homage to Gaetano Fichera, A. Cialdea (ed.) Quaderni Matematici, **7** (2002).

## Books

- [1] The Thermodynamics of Simple Materials with Fading Memory. Springer Tracts in Natural Philosophy No 22 Springer, Berlin 1972.

- [2] Термодинамика простых сред с памятью. Translation of Thermodynamics of simple materials with memory by M. V. Sergeev. Edited by D. N. Zubarev. Новости Фундаментальной Физики. Вып. 4. Izdat. "Mir", Moscow 1974.
- [3] Heat Conduction within Linear Thermoelasticity. Springer Tracts in Natural Philosophy No 30. Springer, Berlin 1985.
- [4] A Commentary on Thermodynamics. Springer Tracts in Natural Philosophy No 32. Springer, Berlin 1988.
- [5] Entropy and Partial Differential Equations. Pitman Research Notes in Mathematics Series. Vol. 295. Longmans Scientific and Technical, London 1993.
