

# Editorial

This special issue of *Note di Matematica* contains the complete texts of the extended lectures course series presented as part of the *Advances Group Theory and Applications 2007* international conference held in Otranto from 4th to 8th, 2007.

The organising committee is expressly grateful to the authors for the range and detail of their scholarly contributions. These form a comprehensive summary and an invaluable basis for further research in the chosen areas. Further, they will provide stimulus and direction in the search for new important results. Special thanks are due also to the contributors to the wide programme of short talks and to all the participants for making the event such a resounding success.

A conference of this magnitude could not be organised without the generous support of many others. In this regard, we wish especially to express our deepest gratitude to *Dipartimento di Matematica e Applicazioni "R. Caccioppoli" of Napoli*, *Dipartimento di Matematica "E. De Giorgi" of Lecce* and *Ministero dell'Istruzione, dell'Università e della Ricerca*.

For their valued administrative assistance and exceptional organisational skills, we thank in particular Maria Maddalena Miccoli, Alessio Russo, Ernesto Spinelli and Salvatore Siciliano.

Francesco Catino  
Francesco de Giovanni  
Martin L. Newell
