I	Introduction	v
II	Preliminary and auxiliary results	xiii
II.1	Recalls on semigroup's theory	xiii
II.2	Feller's classification and generation results	xvi
II.3	Cosine functions	xviii
1	Quantitative estimates	1
1.1	Quantitative approximation of semigroups	1
1.2	Estimate of the resolvent operator	9
1.2.1	Quantitative estimate of the convergence to the resolvent operator	9
1.2.2	Approximation processes for resolvent operators . . .	10
2	Applications to classical sequences of operators	15
2.1	Infinite-dimensional setting	15
2.1.1	Application to Schnabl-type operators	15
2.2	Finite dimensional setting	21
2.2.1	Best order of convergence in $C^{2,\alpha}(K)$	21
2.2.2	Application to Bernstein operators	25
2.2.3	Application to Stancu operators	34
3	Steklov operators	39
3.1	Steklov operators on the real line	39
3.2	Steklov operators on bounded intervals	52
3.3	Steklov operators in weighted spaces	56
3.4	Steklov operators in weighted spaces on $[0, 1]$	72
3.5	An extension to the multivariate case	79
4	Best decomposition	93
4.1	Direct sums of approximation processes	93
4.2	Bernstein-Kantorovich-Durrmeyer operators	96
4.3	Best perturbation of Jackson convolution operators	108

5 Quantitative approximation of cosine functions	111
5.1 Approximation processes for cosine functions	111
5.2 Quantitative estimate of the resolvent	115
5.3 Approximation processes for resolvent operators	116
5.4 Applications to Rogosinski operators	119
Notations and symbols	129
