$$F(x-0,y-0) \leq \underline{F}(x,y) \leq \bar{F}(x,y) \leq F(x,y).$$

Se, dunque, (x,y) è un punto di continuità di F, si ha $F_n(x,y) \to F(x,y)$.

($\Longleftarrow$) La dimostrazione del viceversa è identica a qualla della parte corrispondente del teorema 3.2 con la sola sostituzione di $\delta_2(r,n)$ a $\delta(r,n)$.

Q.E.D.

L'estensione dei risultati di questa sezione al caso della convergenza debole in Δ_r con $r>2$ è ovvia.
